CONCENTRATED STAINSHIELD PROTECTOR

FOR PROFESSIONAL USE ONLY

A water and oil stain repellent, soil retardant, non-toxic carpet and upholstery protector.

Hints and Tips

- **Protects carpet from liquid spills and stains**

A fluorocarbon, water-based stain and soil retardant. This specially formulated carpet protector protects far beyond just dry soil and water repellency. Stainshield protects against oil-based stains and spills too.

- **Keeps carpet looking better between cleans**

An application of Concentrated Stainshield to rugs, carpets or upholstery allows your customers to quickly, easily clean up spills before they penetrate into the fibres causing permanent staining. Makes stain removal and subsequent cleaning easier.

- **Contains special penetrants**

Special penetrants help ensure the fibres completely coated and cured for maximum protection, allowing the protection to penetrate into the fibres for extra protection.

- **Leaves Fibres feeling soft and natural**

Application does not affect the feel of your carpet or upholstery. Apply to whole carpets or just to traffic areas for extra protection.

DIRECTIONS

For best results apply a 20 to 1 dilution of textile rinse before applying the protector as a fine mist to acidify the carpet, this will ensure full protection is achieved

1. **For Carpets** – dilute 4 to 1 with water and apply 5 litres of pre mixed solution to 25 metres of carpet (40oz carpet /axminster type pile) alter the coverage depending on the density of the pile whilst ensuring the fibres are fully dampened. Spray on using a dedicated sprayer, using a 8004 size fan type jet in overlapping strokes until all the product is applied.
2. **For Upholstery** – dilute 2 to 1 with water and apply 2 litres of mixed solution over 7 square metres of fabric (approx. 2 seater settee and 2 chairs) Spray on with a dedicated sprayer using a 8001 size jet and applying many fine coatings to the fibre rather than a heavy spray.

Brush in either with a carpet pile brush or upholstery brush avoiding natural fibre type bristles as these can be affected by the protector

Concentrated Stainshield Protector Characteristics

pH Value:	4.5 – 5.5
Coverage:	Variable to use and application
Dilution:	Carpet 4 to1 with water Upholstery 2 to1 with water.
Appearance:	Opaque off white liquid
Fragrance:	Characteristic of a polymer
Packaging:	Single 5L or case of 4
Re-order Code:	Single: UKSC15 Case: UKSC45

PRE-TEST ALL AREAS TO BE TREATED.

Tong Park, Otley Road, Baildon,
West Yorkshire, BD17 7QD UK
